# Unit 11: Assignment

Problem 1

Node.js is a platform independent and open source server Javascript runtime. This means that it extends the use of JavaScript to servers. One core concept of Node.js that differs from other server languages is that it is designed to be asynchronous. This means that it heavily makes use of event-driven and a non-blocking I/O model.

Problem 2

```
[~] $ node -v
v10.2.1
[~] $ date
Sat May 26 14:13:59 PDT 2018
[~] $
```

Problem 3

See `websvr.js`.
